件名: Re: 5034501208 Inner mold was burr

Dear Ba Thi Binh san

Thank you for your patience.

We checked the production history and the keep sample.

There was no change point and burr sample.

There is no point of change, there is no defect in the keep sample,
the defect occurrence rate is as low as 1/30440, so I guess that
it was a sudden occurrence of defect.

In order to clarify the cause, I would like to return a defect sample

Best Regards,
Takehana
